CLOUD SOFTWARE ENGINEER

Talented Software Engineer with experience designing, developing and deploying AI (Artificial Intelligence) solutions for clients in multiple industries. Demonstrated design and delivery of end to end complex AI solutions to clients in the Cloud. Collaborative communicator adept at working with internal and external cross-functional teams to drive initiatives. Certified AWS Solution Architect.

AREAS OF EXPERTISE

Software Development	Artificial Intelligence	Cloud Solutions
Requirements Gathering	POC (Proof of Concept)	REST APIs
Agile/DevOps	Infrastructure Orchestration	CI/CD

CORE TECHNICAL COMPETENCIES

PROGRAMMING	Java, Ansible, Bash, Python, JavaScript, NodeJS, Make, Makefile, Knockout.js, jQuery, RUBY, Ruby on Rails, HTML5, CSS, Bootstrap, XML, JSON, C, C++, JUnit, Selenium, Mocking
DATABASES	MySQL, MariaDB, AWS Aurora, DynamoDB, AWS Redshift, Redis, Memcache, Postgres SQL
TOOLS & UTILITIES	Terraform, Teamcity, JIRA, Docker, AWS, Kubernetes, Vagrant, Elasticsearch, Logstash, Kibana, Git, Maven
OPERATING SYSTEMS	OS X El Sierra, Windows, Ubuntu, CentOS, Kali, Mint, Zorin

EXPERIENCE

INTEL -Raleigh, NC

1/2018 - Present

Software Architect | Software Development Engineer, Professional Services

Worked as a part of the Professional Services team that developed and delivered AI solutions to multiple clients.

Software Development

- Developed API's in Java and Python to facilitate AI product REST querying and processing, enabling concurrency and faster results in client environments.
- Successfully completed AI projects in client environments using various algorithms in conjunction with the AI product, adept at rapid prototyping for fast turnaround times in POC's (Proof of Concept) and very well versed in interfacing with Clients.
- Delivered end to end client projects (POC's) integrating Data Science techniques under tight time lines.

Cloud Infrastructure Solutions (AWS Certified Solutions Architect)

- Create highly available, redundant and fault tolerant clusters on AWS for Intel Saffron customers.
- Implement services like AWS Lambda and CloudWatch in infrastructure, reducing costs by 70%.
- Designed and implemented a highly available AWS architecture to migrate our conventional sales and demo servers to a centralized AWS infrastructure resulting in a 60% cost reduction.

Product Development Projects

▪ Intel Saffron one-click Installer.

Completely automated the process of conventional Saffron installation by creating a pipeline using Ansible, Docker, Docker Swarm and Bash scripting which reduced the installation time by 50% and removed any margin of human error.

Intel Continued

- **Centralized Logging with Elastic stack, Project Owner.** Developed the new logging mechanism to visualize logs for SMB using Elastic stack to monitor and get logs from worker nodes
Removed the NFS mounting of log directories to achieve a centralized logging system which in turn reduced network latency by 50%.

SDE Intern, Professional Services, 2017 (4 months)

As an intern built the Intel Saffron Java REST API from the ground up including the design and development of the AI's Java REST tool encapsulating unique security protocols and complex API classification and recommendation, leveraging AI product and reducing the time to POC's.

- The tool enabled 10x faster API calls and space creation and provided simpler and easy to use rest API calls for the client user.

EDUCATION

Master of Science in Computer Science - North Carolina State University, Raleigh, NC

Bachelor of Technology - Jamia Millia University, New Delhi, India

ADDITIONAL ACAMEDIC PROJECTS

DevOps-Pipeline, uses Ansible, Vagrant, AWS, Jenkins, Docker, Nginx, NodeJS (git.io/vHiiN)

Developed a complete DevOps pipeline to deploy, build and test web applications on remote EC2 instances.

Kubernetes-deployment, uses Kubernetes, docker, AWS, Vagrant (git.io/fNOKh)

Created a 3-node cluster using Vagrant and AWS to deploy a multi-tiered microservices based application using Kubernetes and performed rolling updates of the updated docker images.

Serverless Repos, uses AWS-S3, Route53, API Gateway, Lambda (git.io/fNlul)

Collection of various AWS Lambda and serverless deployments such as a serverless REST API, S3 events, EC2 management.

HACKATHON PROJECTS

BitcoinBot in HACKNC 17 (UNC Chapel Hill, NC USA) uses AWS Lambda, NodeJS, Alexa Skills, Bash, Ansible - (git.io/vFWAx)

A multifunctional Amazon Alexa skill to help amateur investors make an informative decision in buying bitcoin using just Alexa.

LEADERSHIP AND VOLUNTEER SERVICE

Project Lead for a new feature in an AI product development at Intel

President of IEEE JMI Student Branch and IEEE JMI Computer Society (2015-2016).

Dr J. K. Pal Memorial Award for the IEEE Best Student member 2016 from IEEE Delhi Section of Region 10 Asia Pacific.

Active member at the Goodwill Community Foundation in Durham, North Carolina
