- I use services like AWS Lambda and Cloudwatch to reduce the infrastructure costs by 70%

### Intel Saffron one-click Installer

- Used Ansible, Terraform, Docker Swarm, Docker Compose and Bash scripts to fully automate the process of the conventional installer for Intel Saffron
- Reduced the installation time by 50% and removed any margin of error

### ELK Stack Project Owner

- Developed the new logging mechanism to visualize logs for Intel Saffron
- Used ELK stack and Beats to monitor and get logs from worker nodes

### Intel Saffron REST Client

- Developed Intel Saffron's Java REST tool that encapsulates the unique security protocol and complex API from scratch
- Earlier, creating one 'space' took more than an hour. Now, the customers can create thousands of SMB spaces in less than 5 minutes
- Its intuitive deliverable zip file and heavy documentation guide made SMB REST calls simpler and easier for the customer
- Reduced the engineer allocation time from 15.75 hours to 1 hour, 93.65% reduction in time, hence our company saved money

### Saffron Automated Tool-Setup Client

- Revamped the conventional deployment strategy of the tool being built for an external agency by Intel
- The new technique deploys an up and running software (classified) on top of a Saffron base
